Washington

ORIGINAL

The Long Island Sound does not need a costly, risky Liquid Natural Gas terminal proposed by the private Broadwater. There are substantial risks associated with placing this gigantic facility in the Sound.

Clearly environmental, recreational and neighboring security are only a few of these risks.

The constant armed private security forces surrounding the LNG Barge would disrupt the peaceful tranquil waters of the Sound. This facility limits public access and sets a dangerous precedent of industrializing the sound.

Respectfully
Patricia Dome
