FEDERAL ENERGY
REGULATORY COMMISSION

The Liquefied natural gas facility endangers the health and safety of the Long Island Sound and should not be built.

My children go to the Long Island Sound and will continue to go to the beach there and swim in the water.

This facility limits public access and we're afraid that it will set a dangerous precedent of industrializing the Sound.

This is our body of water where we play and our children play and swim.

Please do what you can to prevent this facility from beginning its construction in our Sound.

Thank you for your consideration and attention to this matter.

Sincerely,

Amy Julien
