Re: Liquefied Natural Gas Facility

Dear Ms. Salas:

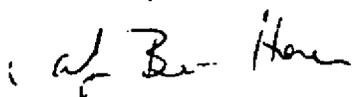

I am writing to you today to express my concerns about the proposed building of a Liquefied Natural facility in Long Island Sound. Our water is a precious natural resource and we've already done enough damage to it. We're finally recovering from the damage that was done to the shell fish population and now you're considering putting our waters at risk once again.

When are you going to start looking into renewable energy?? Our over use of gas and gas products is now responsible for the polar ice caps melting at an exponential rate and contributing greatly to the effects of global warming. There are many alternatives that need to be looked in to TODAY.

Please don't follow in the foot steps of our "great" leader, President Bush, who stands to profit personally from extended use of gas and gas by-products. This would also set a dangerous precedent for commercial use of Long Island Sound. Please think long term here. Think of the children and our children's children and what this legacy could mean.

Thank you.

Sincerely,

Carolyn Brennan-Horner
