FEDERAL ENERGY
REGULATION COMMISSION

Ms. Salas:

CP06-54

Aren't there better sources of fuel and energy than natural gas? Aren't there better ways to spend taxpayer money rather than having a security force defending the use of a limited resource?

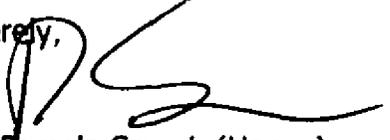

The Broadwater project will be more of an eyesore than the fought-over windmills that would produce energy from a renewable resource. Already, public access to waterways and beaches is becoming more and more limited, and this project adds to that limitation. The proposed project will affect waterways, and, despite company arguments, will endanger the already fragile environment.

Please find other ways to access energy that are not temporary stopgaps, or openings for large corporations to get access our diminishing land and water resources. Think long term, think sustainable. Think renewable resources. Say no to Broadwater and other projects of its kind.

Personally, I support wind energy, and other renewable, sustainable resources. It would keep us out of our neighbors' countries, and would provide cleaner, durable, long term available resources.

Please be careful with our environment, whether it is the Long Island Sound or other natural resources. Think long-term, think in decades and centuries. Think about environmental resources of beauty. Think in terms of the already limited corridors of water traffic. Think no to *Broadwater*.

Let me know how it goes, please.

Sincerely,

Rev. Pamela Szurek (Haney)
