Dear Ms. Salas:

I was recently advised of the nature of a dangerous facility that is slated to be built in the middle of the Long Island Sound.

It is my feeling that a liquified natural gas facility does not belong in Long Island Sound.

Sincerely,

*Holly Fleury*

I am writing this letter to voice my concern about put in LNG Facility in the Long Island Sound. This is a very dangerous , since LNG is a Explosive Gas. We cannot afford a environmental disaster waiting to happen. The regional economy of the LI Sound creates 5.5 billion dollars annually. We cannot jeopardize the safety and well being of all people and residents who lived and work along the LI Sound.

Dear Ms. Salas:

It has come to my attention that the Long Island Sound is in jeopardy. If Broadwater is successful in their attempt to build a liquefied natural gas facility just nine miles away from Rocky Point, our quality of life will surely go downhill.

I have lived on Long Island Sound all of my life- first on Long Island in Northport, and now in New Rochelle. Long Island Sound has always been a safe place to go fishing, boating, and just to walk along. I have made many memories along the Sound, and I hope my children will have the same opportunity. However, if the air along the Sound is not clean because carbon dioxide emissions will be so high as a result of the pipeline, then no one will be able to walk along the Sound safely. If marine life is endangered, as it will be should the pipeline come to fruition, then my kids will never know the joys of fishing in the Sound. They will never befriend lobsterman and other fisherman, since these folks will lose their jobs since no one will want to eat contaminated fish. Life along the Sound will never be the same, and it will not be changed for the better.

I am writing the letter in the hopes that it will not just wind up in the shredding file, but that you will read it, consider what I am writing, and decide to use your power to stop the Broadwater Project. My children and the generations of children after them will thank you for saving their environment. Thank you for your consideration.

Sincerely,

Leigh Becker

Dear Ms. Salas,

My husband and I and our 3 children live on the Long Island Sound. We consider ourselves very lucky to be surrounded by such a beautiful body of water. We are very concerned to learn that Boardwater is seeking to build a liquefied natural gas facility in the middle of the Long Island Sound. We believe that this facility limits public access and sets a very dangerous precedent of industrializing the sound. For many years the surrounding areas have spent time and money cleaning up the sound. We finally have our wild life back! The LNG facility endangers the health and safety of Long Island Sound and should not be built. We would appreciate it if you could let us know in writing your position on this matter.

Sincerely,

*Marlene DiChiacchio*

Dear Magalie Salas:

I am truly concerned about the possibility of a liquid natural gas (LNG) facility being built on Long Island Sound. My family has lived on the Sound Shore of Westchester for over 100 years. My grandfather made his living and at times fed his family with the fishing he did on Long Island Sound. The fish population has already been depleted and many of the fish and lobster are no longer safe to eat due to commercialization and pollution. I feel any further disruption and industrialization of this beautiful natural resource that so many have enjoyed for so long would be a terrible act.

Long Island Sound is no place for a liquefied natural gas facility! We already have the dangerous Indian Point Nuclear Power Plant leaking toxins into the Hudson River on a daily basis. The last thing Westchester County citizens need is an LNG facility further endangering the health and safety of their community. How many more burdens are the citizens of Westchester County expected to accept?

This facility should not be built and I am counting on you to ensure that it is not. I would appreciate a written response regarding your position on this matter.

Sincerely,

Eileen Mann

2006 MAR 22 P 4 27

Dear Mr. Salas:

I am writing to express my opposition to the LNG facility in the middle of the Long Island Sound. At a time when the nation and the world are becoming aware of danger to our environment and taking steps to protect our world from the dangers of industrial pollution such a facility would be a regressive act out of step with the actions of our times. The facility would open the door to additional exploitation of the Sound as well as bringing large tankers into the sound with the dangers of oil spills. Birds and fish that live in the sound and provide the necessary link in the environmental chain of life would be disturbed.

The Sound is an open area of beauty, wild life and pleasure sailing would be despoiled for commercial purposes. The citizens along the shores of the Sound have nothing to gain by LNG and everything to lose.

Please oppose the construction of LNG in the Long Island Sound.

Respectfully,

Walter Reichman Ed.D

Proposed to construct a hydrogen natural gas  
facility on Long Island Sound

I have learned of the above project & find it  
a likely reduction  
The cost of construction is subject to market  
when it has found the so-called "market" conditions,  
is split on a case by case environmental pollution  
and environmental activities all over strongly  
demand the rejection of the project

Dear Ms. Salvo,

As a member of the Long Island Community, and as parents of 3 beautiful children, we are deeply concerned about the prospect of an ANR facility in the Long Island Sound. It is our view that our children's future and environment rests squarely on our shoulders, and as such we are prepared to assure that we give them the gift of a secure, healthy future.

ANE will undergo that future and should NOT be built. In addition it sets a dangerous precedent in regard to future industrialization of the sound. Please take our view into account and help to prohibit this dangerous action.

Thank you,

Sharon Salvo

March 10, 2006

Dear Ms. Magalie Salas:

I am writing to inform you of how disgusted I am that as a citizen living in one of the highest taxed communities in the United States that you would even think of putting a Liquefied Gas Facility in the Long Island Sound. This would endanger the health and safety of the Long Island Sound, the people living in and around the Sound and should not be built. This facility would limit public access and sets a dangerous precedent of industrializing an already over industrialized region with many safety and health issues as it is. The money would be better spent on alternate forms of energy and other locations. With Long Island getting only 1/5th of the energy it is outrageous that we should risk our own communities in carrying the facility.

Thank you for your attention in this matter.

Very truly yours,

*Soraya Zahn-Rogers*
