

PART IV - AFFECTED ENVIRONMENT

PART IV
AFFECTED ENVIRONMENT

General Description

For further description of the affected environment, refer to Part II, Section 2 Coastal Regions, Resources and Problems of New York.

The coastal area of New York State is comprised of all coastal waters within the State's territorial jurisdiction and the shorelands adjacent to these waters. Article 42 of the State's Executive Law describes coastal waters as: lakes Erie and Ontario; St. Lawrence, Niagara, East and Harlem rivers; Hudson river south of the Federal dam at Troy; Kill von Kull and Arthur Kill; Long Island sound; Atlantic ocean; and, their connecting water bodies, bays, harbors, shallows and marshes. The latter include, but are not limited to, the following:

1. Block Island sound;
2. Great South, Shinnecock, Great Peconic, Little Peconic, Gardiners, Napeague, Fiorches, Smithtown, Northport, Huntington, Manhasset, Little Neck, Flushing, Jamaica, Upper New York, Lower New York, Eastchester, Raritan, Irondequoit, Sodus, Little Soaus, Henderson, Black River and Chaumont bays;
3. Hempstead, Cold Spring, Port Jefferson, Oyster Bay and Huntington harbors; and,
4. Extensive segments of the Peconic, Connetquot, Nissequogue, Carmans, Bronx, Hutchinson, Croton, Buffalo, Genesee, Oswego, Black, Chaumont, Grass and Raquette rivers.

Entire lengths or substantial segments of numerous creeks, many small bays, harbors and ponds, and extensive saltwater and freshwater marshlands are included within the State's coastal waters.

The onshore portion of New York State's coastal area is limited, by Article 42 of the Executive Law, to adjacent shorelands containing uses which have a direct and significant impact upon coastal waters. These shorelands include, but are not limited to, islands, wetlands, beaches, dunes, barrier islands, bluffs, intertidal estuaries and erosion prone areas. In addition to the above, onshore physical and man-made conditions were taken into consideration. As a result of this process, the onshore portion of the State's coastal area varies from region to region. Generally, the following conditions prevail:

1. The inland boundary is approximately 1000 feet from the mainland's shoreline;
2. In developed or urbanized locations along the coast, the inland boundary is about 500 feet from the shoreline or less in areas where a major roadway or railroad line runs parallel to the shoreline; and,
